Introduction

What is a literature review?

"A literature review discusses published information in a particular subject area [...]"

The writing center - [The University of North Carolina at Chapel Hill](#)

*"The focus of a literature review is to **summarize and synthesize** the arguments and ideas of others without adding new contributions."*

The writing center - [The University of North Carolina at Chapel Hill](#)

Main goals

- *Summarise and analyze previous research and theories;*
What do we already know about this topic?
- *Identify areas of controversy and contested claims;*
What other researchers agree with? What is a
consensus?
- *Highlight any gaps that may exist in research to date.*
How can we contribute with this research field?

Different goals to different reports

- Chapter of a project, dissertation, thesis
- Article

Types of literature review

Types of literature review *

* There are many types, here we listed some of them

- **Narrative review** - identify a few studies that describe a problem of interest; no specified search strategy
- **Systematic review** - use rigorous search strategies to select all the relevant literature, and then evaluate critically/compare the content of the publications
- **Bibliometric** - use quantitative methods to analyse patterns in publication; the focus is not the content of the publications

Attention: there are reviews that uses a combination of those aspects.

Review

Open space planning models: A review of approaches and methods

Tseira Maruani*, Irit Amit-Cohen

Department of Geography and Environment, Bar Ilan University, Ramat-Gan 32900, Israel

Received 23 June 2006; received in revised form 4 December 2006; accepted 1 January 2007

Available online 20 February 2007

Abstract

Land use planning systems, worldwide and in Israel, are now taking into account environmental, social, economic and cultural developments. These systems are intended to solve issues related to the conflict between developmental requirements and the need to preserve cultural and natural resources. The importance of open spaces is increasingly recognized when addressing these issues, while their special characteristics affect planning decisions. These characteristics led over the years to the emergence of various approaches and planning methods, guided by essentially different concepts of open space priority functions. The purpose of this article is to review commonly used models of open space planning and their guiding principles, point out some of their merits and limitations as planning tools, and organize these in a comparative classification framework according to their potential use as a response to the demands for open space and conservation of existing natural values.

Under review:

A Systematic Review of The Literature on Climate Justice: A Comparison Between The Global North and South
Marcos Tavares de Arruda Filho; Pedro Henrique Campello Torres; Pedro Roberto Jacobi

Abstract: This study analyzes the characteristics of publications on climate justice on a global scale and between countries in the North and South, using the guidelines of the PRISMA model. 826 relevant papers were identified in five databases, with 717 from the global North and 109 from the South. There is a concentration of work in the countries of the Global North. The social and economic disparities between countries in the North and South are reflected in the distribution of publications. The focus of climate justice research in the countries that make up the Global South is mainly on the socio-environmental context and the social vulnerability of the population; in this group, it is the first time that this theme has been expressed in the analysis.

Keywords: climate change, climate emergency, bibliometrics, database search, climate policy.

ARTICLE INFO

Keywords:

Ecosystem service integration
Land use planning
Planning process
Planning instrument
Science-policy interface

ABSTRACT

The integration of ecosystem service (ES) knowledge into decision-making processes is increasingly endorsed by various policies and initiatives, with spatial planning targeted as one of the most relevant fields. Learning and feeding back from existing experiences is therefore a fundamental step to ensure appropriate and useful support by ES science. This paper aims to gather and critically analyse how ES science contributes to spatial planning practices. Through a systematic review of the literature about ES use in spatial planning, we map the level of integration of ES knowledge, the scale of case studies, and the type of planning addressed; and we identify and analyse case studies of real-world applications. Studies explicitly aimed at supporting spatial planning have increased over the last decade, but are still scarce. The real-world case studies reveal advantages of integrating ES knowledge into spatial planning processes, mainly concerning practical aspects such as synthesizing complex socio-environmental information and promoting participation. Windows of opportunity offered by regulatory frameworks and innovative processes and instruments, such as marine spatial plans and strategic environmental assessments, are key factors triggering the integration. However, supportive contextual conditions are necessary, including science-policy collaborations across the entire planning process and environmental awareness among policy-makers and stakeholders.

Bias

Bias in Science?

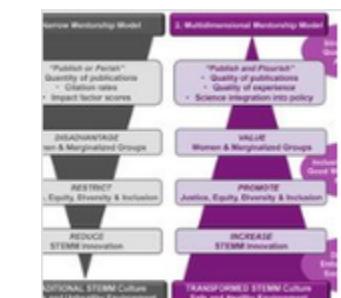

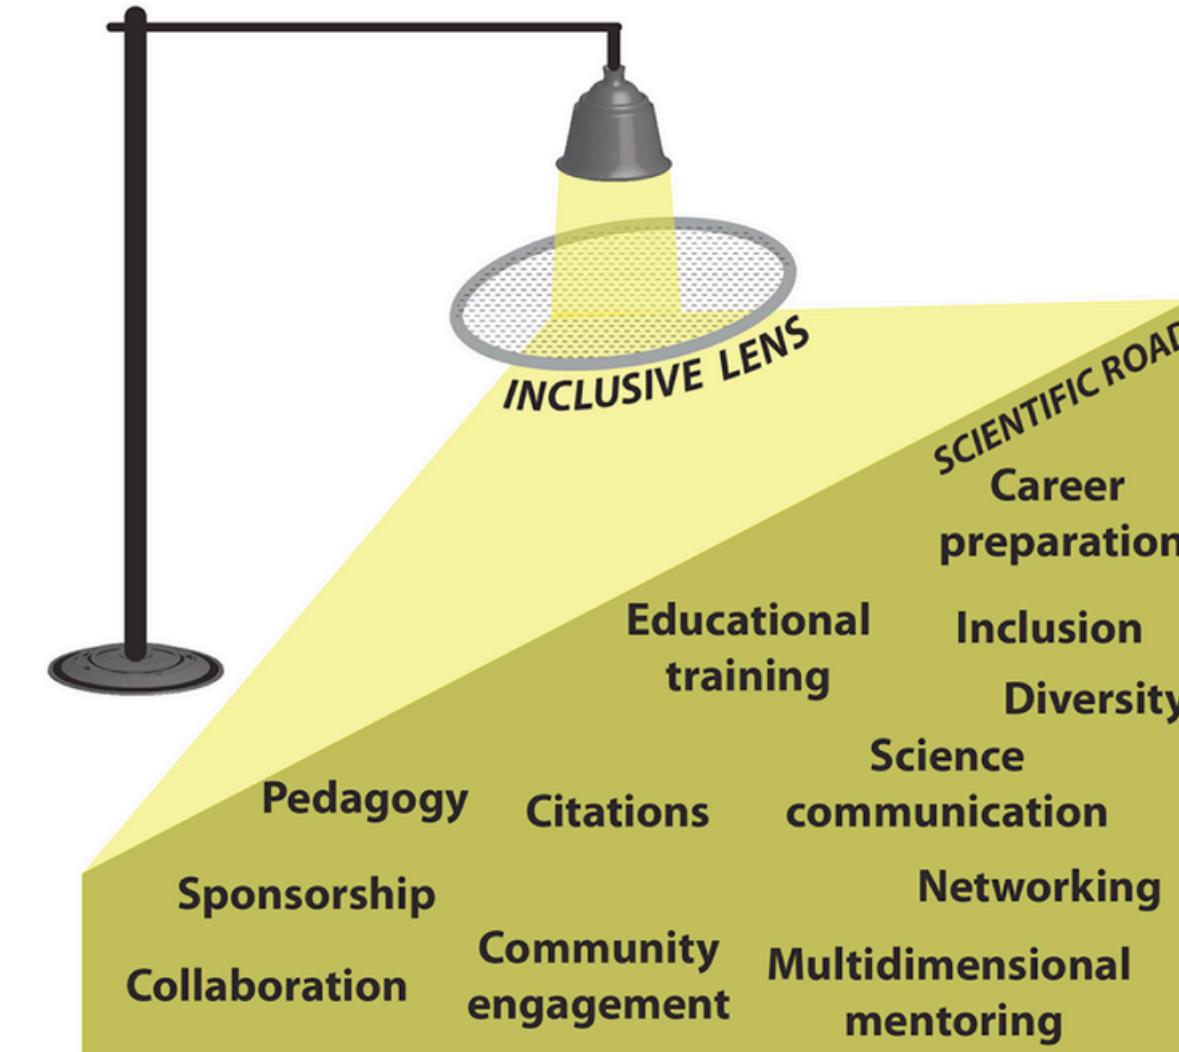

- "In scientific research, a bias is a systematic or methodological error that causes misrepresentation of the study's outcomes." ([DistillerSR](#))
- "To obtain the least biased information, researchers must acknowledge the potential presence of biases and take steps to avoid and minimise their effects. "
([Catalogue of Bias](#))

Why we are building the Catalogue of Bias

In 1979, Dave Sackett called for the creation of a catalogue with definitions, explanations and examples of biases

Racial bias

Compliance,

Centre for Evidence-

Search the Catalogue

Catalogue of Bias

[HOME](#) [BIASES](#) [BLOG](#) [CONTACT](#) [ABOUT](#)

Language bias

Publication of research findings in a particular language.

Background

The English language has been the predominant language in medical research. Publication in other languages can sometimes be regarded as of secondary importance. Studies publishing positive results might also be more likely to publish in English. Reading and using only English language research could provide a biased assessment of a topic, and can lead to biased results in systematic reviews.

Example

A [1997 Lancet study](#) looked at the language used to publish the results of randomized controlled trials performed in German-speaking regions of Europe. The authors found that

HOME BIASES BLOG CONTACT ABOUT

All's well literature bias

Occurs when publications omit or play down controversies or disparate results.

Background

All's well literature bias refers to a situation in which there is a bias to dominant theories that in some way precludes the publication of opposing theories evidence. The mechanism for how this might happen is not clear although it might be imagined that it could take place either subconsciously, or consciously by those who have vested interests in maintaining the currently dominant theory.

Positive results bias

The tendency to submit, accept and publish positive results rather than non-significant or negative results.

Background

Positive results bias occurs because a considerable amount of research evidence goes unpublished, which contains more negative or null results than positive ones. This leads to spurious claims and overestimation of the results of systematic reviews and can also be considered unethical. Non-publication of results can also lead to research wastage as researchers may unnecessarily repeat studies because the results are unpublished.

Example

A review of empirical studies and assessment of 300 systematic review found that trials with positive outcomes are twice as likely to be published, and published faster, compared

Table of Contents

- Background
- Example

Bias in Systematic Reviews

Types of Bias

- Publication bias - How similar are results from published versus unpublished studies?

Watch for:

- Incomplete or selective reporting of outcomes
- Arbitrary limits such as language or choice of resources
- Truncation bias - study is published in a briefer form with less details
- Time-lag bias - delayed publication of findings
- Language bias - more likely to be published in English
- Citation Bias - citation/non-citation of research findings
- Selective outcome reporting bias - selective reporting of some outcomes but not others
- Location bias - journals with different ease of access/levels of indexing in standard databases
- Multiple (duplicate) publications
- Database bias - some databases are more likely to index certain languages/journals

Research notebook

Research notebook

- Document **every step** of the process in literature review, ensuring transparency, organization, and consistency.
- It will be useful when **reporting** your findings (eg. writing an article).
- It can be a digital notebook: eg. a Google Docs file.

Record on your research notebook

Search strategies:

- What databases were used?
- When the research was conducted? (date)
- What were the terms searched? (descriptors)
- What type of search? Eg. keywords, title,...

Record on your research notebook

Document inclusion/exclusion criteria:

- What was the criteria for including or excluding content from your review?

Eg. "Included only articles published in peer-reviewed journals"

Eg. "Excluded studies that focused on rural areas, included only urban case studies"

Record on your research notebook

Progress, reflections:

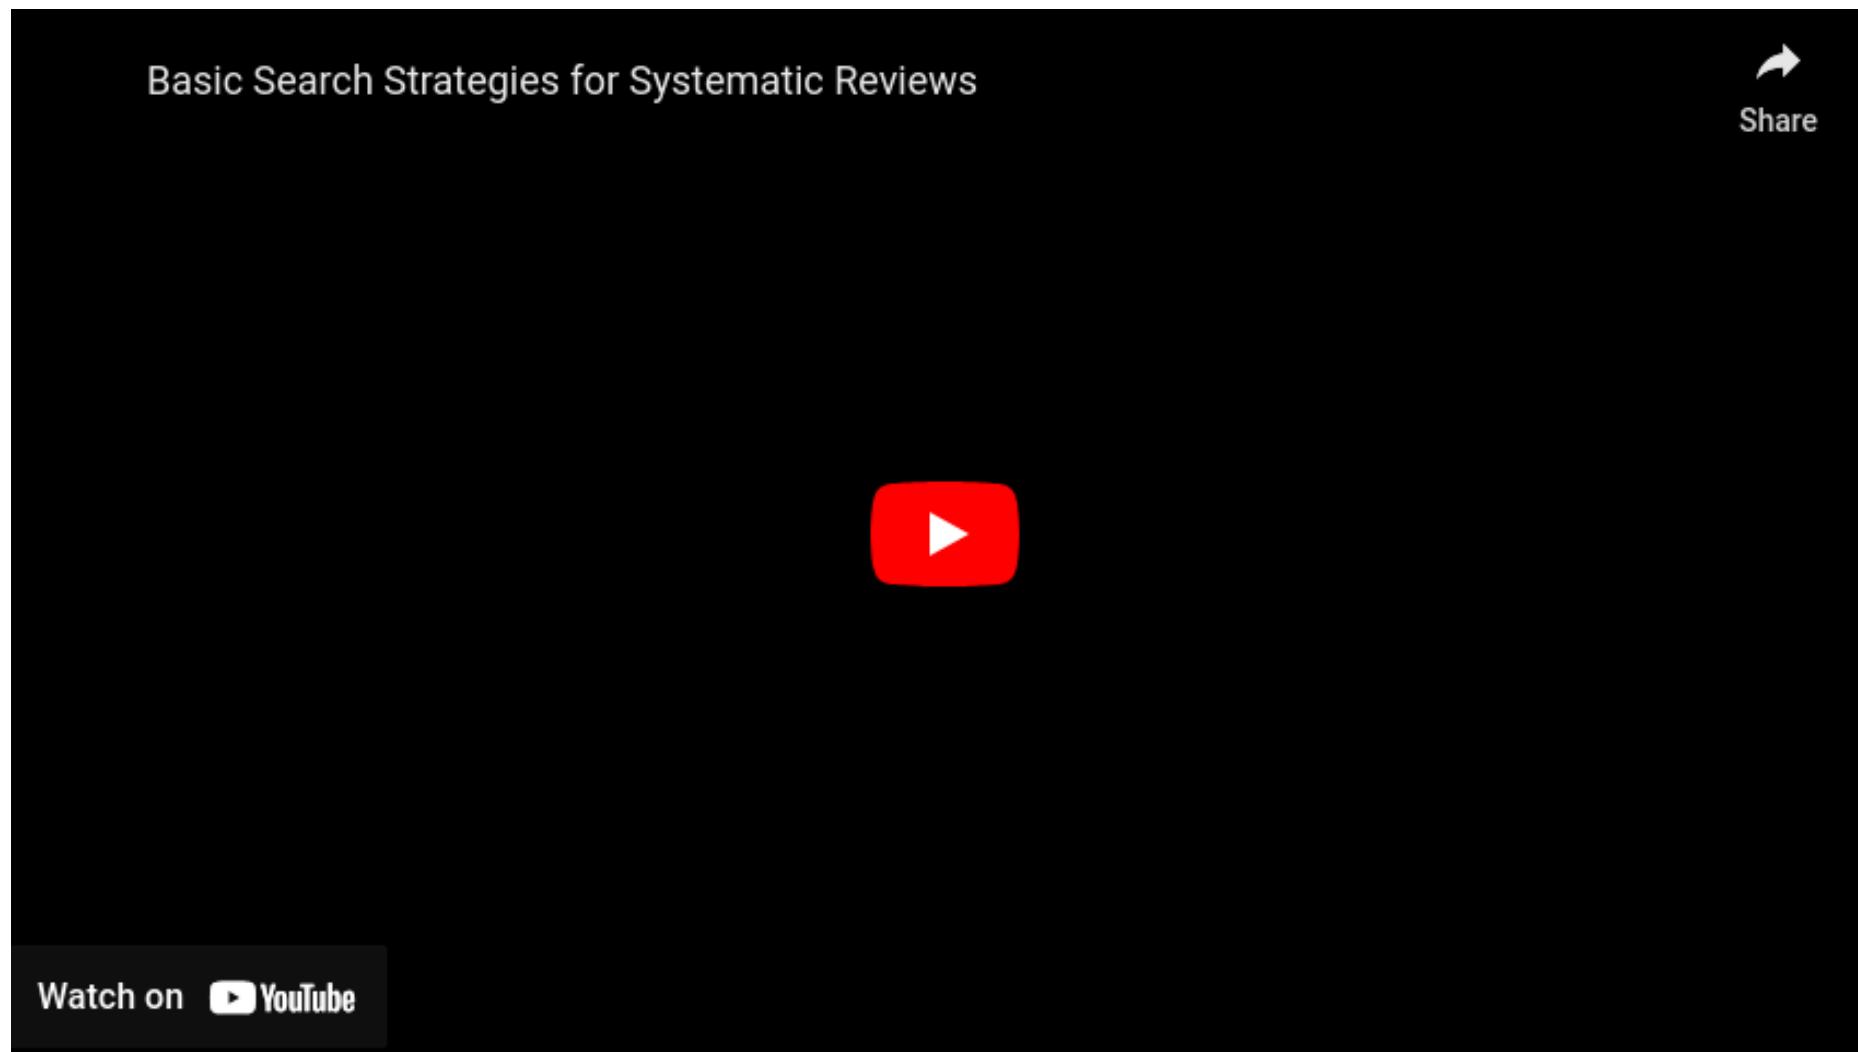

- What decisions did you made along the way?
- What were the challenges?
- What do you think are limitations of your research?
- Is there any possible bias?

How to search?

(this may vary for databases)

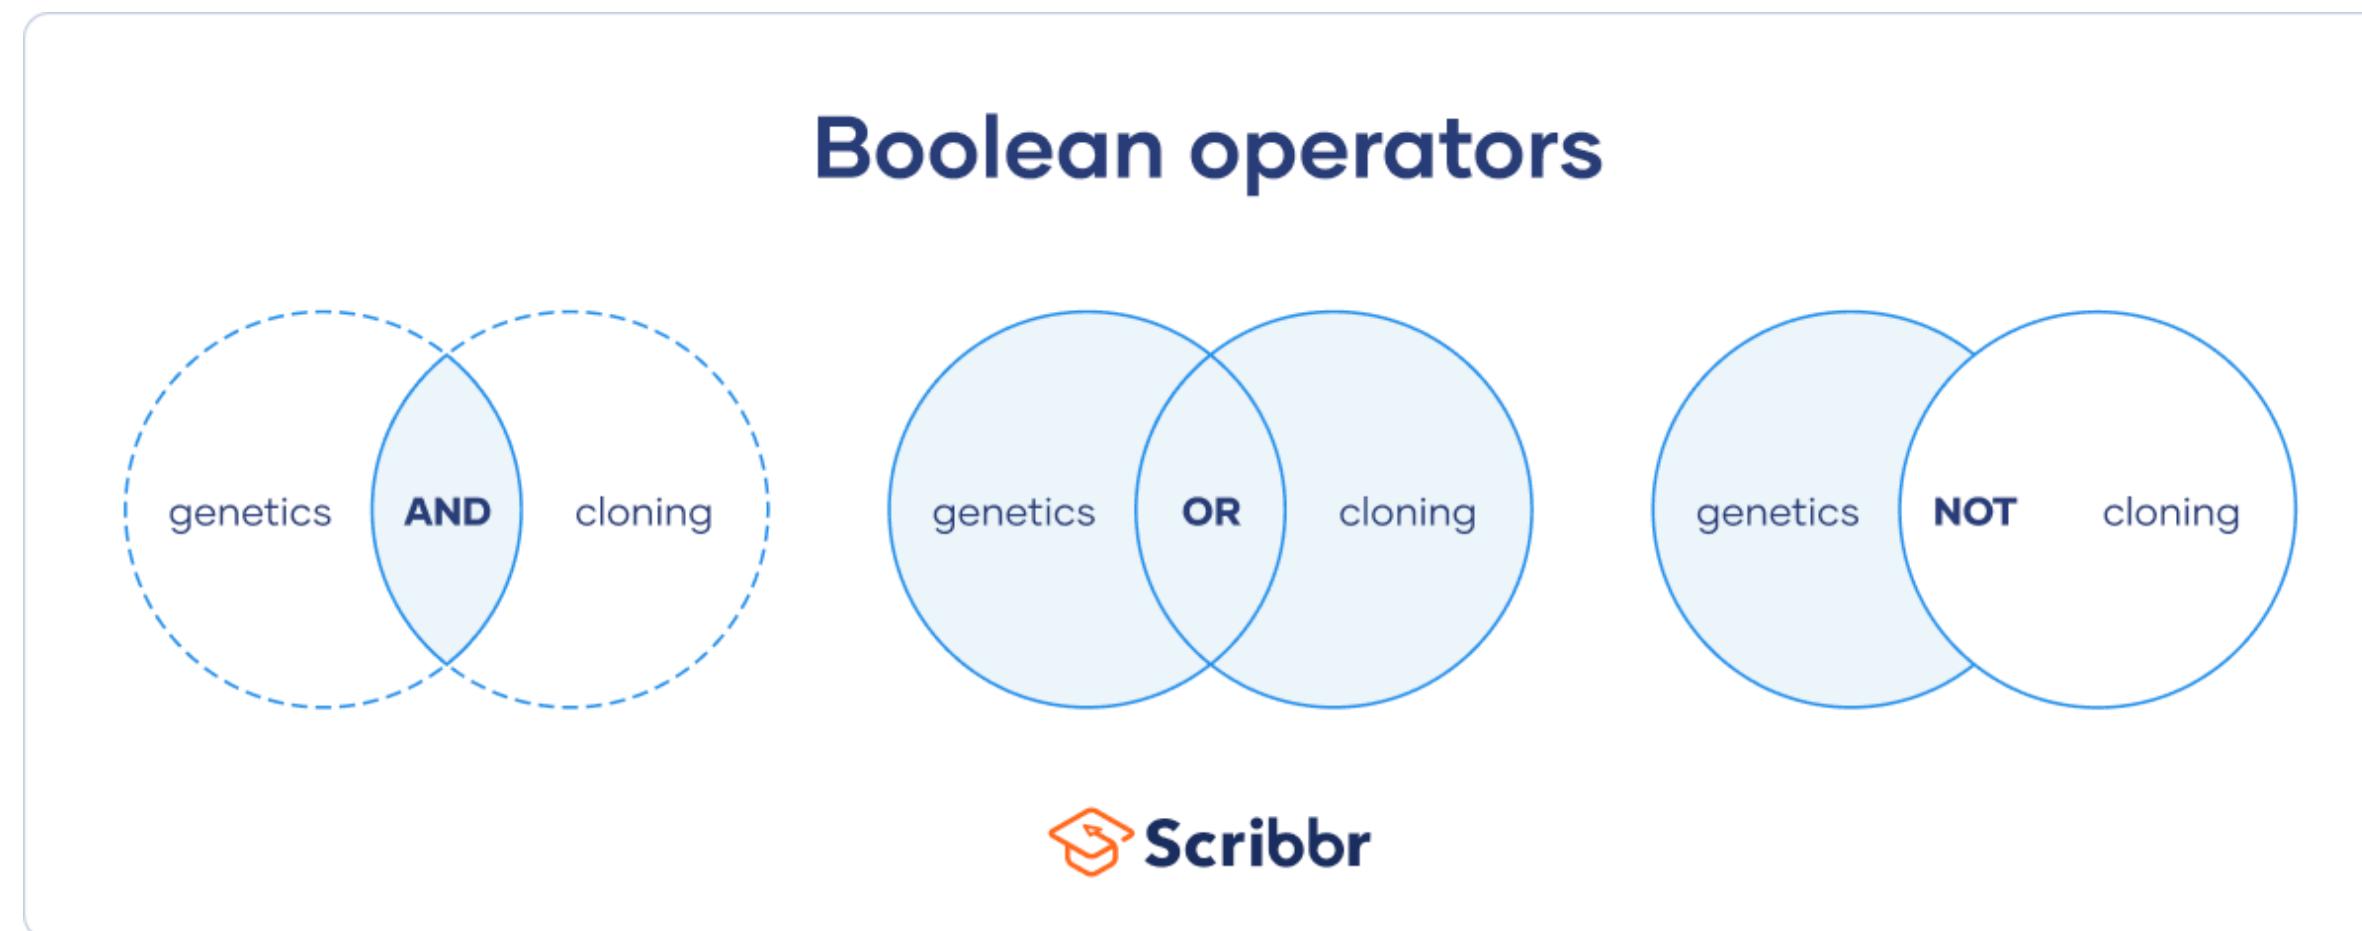

Searching strategies

- IMO, the most challenging part!

Boolean operators

AND, OR, NOT

Example with Periodicos CAPES:

User friendly search (Busca avançada):

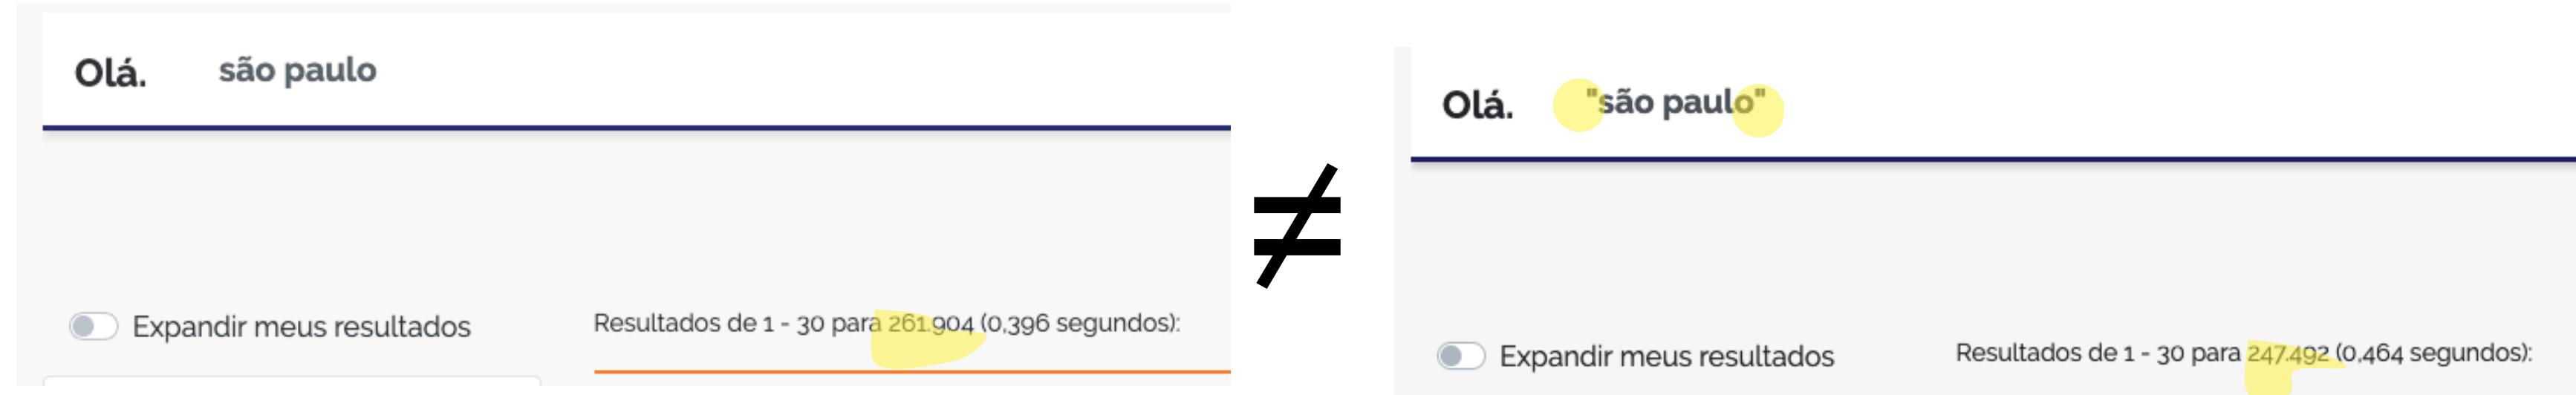

The screenshot shows the advanced search interface for Periodicos CAPES. At the top, there is a dropdown menu labeled "Escopo da Busca:" with "Buscar tudo" selected. Below it, the search query is entered into three separate fields, each consisting of a dropdown menu ("Qualquer campo" or "E") followed by a text input field. The first field contains "São Paulo", the second "Covid-19", and the third "mortality". To the right of these fields is a dropdown menu labeled "Tipo de Material" with "Todos os tipos" selected. At the bottom right of the search form is a button labeled "BUSCAR" with a magnifying glass icon.

Less user friendly search (Busca simples):

Olá. "São Paulo" AND Covid-19 AND mortality

Quotation marks

1 Heterogeneous impacts of mobility restrictions on air quality in the State of São Paulo during the COVID-19 pandemic

Samirys Sara Rodrigues Cirqueira, Patrícia F. Rodrigues, P.T.B.S. Branco, Evangelina Vormittag, R.A.O. Nunes, Andressa Vilas Boas Anastacio, Mariana Matera Veras, Sofia Sousa, Paulo Hilário Nascimento Saldíva

Air quality in the State of **São Paulo** was evaluated during the first general State plan of mobility restrictions due to the **COVID-19** pandemic (24th March to May 31, 2020). Nitrogen dioxide (NO₂), ozone (O₃), particulate matter PM10 and PM2.5 and sulphur dioxide (SO₂) concentrations were assessed in cities of the **São Paulo** State with a monitoring station and compared to historical data. Linear regression models were built to investigate the relationship between the isolation of the population - determined ...

Listas de bases e coleções

Esta seção reúne uma gama de conteúdo técnico-científico, como coleções de periódicos, bibliotecas e repositórios digitais e bases de dados nacionais e internacionais. Ela disponibiliza acesso a materiais diversos como: artigos, resumos, referências, estatísticas, teses, dissertações, material audiovisual, dentre outros. A pesquisa por bases e coleções permite a consulta de três formas: por título, por área do conhecimento ou avançada.

Na primeira aba, busca por título, é possível localizar um conteúdo pelo nome, letra inicial ou verificar a lista completa. Caso a consulta seja realizada por área do conhecimento, são apresentadas as subáreas e a quantidade de conteúdo disponível em cada uma. A busca avançada permite associar campos como editor responsável, tipo de conteúdo, bases nacionais ou de acesso gratuito.

Os treinamentos *on-line* do Portal de Periódicos da CAPES são gratuitos e ensinam como otimizar a pesquisa por meio de cada tipo de busca.

Conducting a literature review

(the steps depends on the type of literature review)

Conducting a literature review

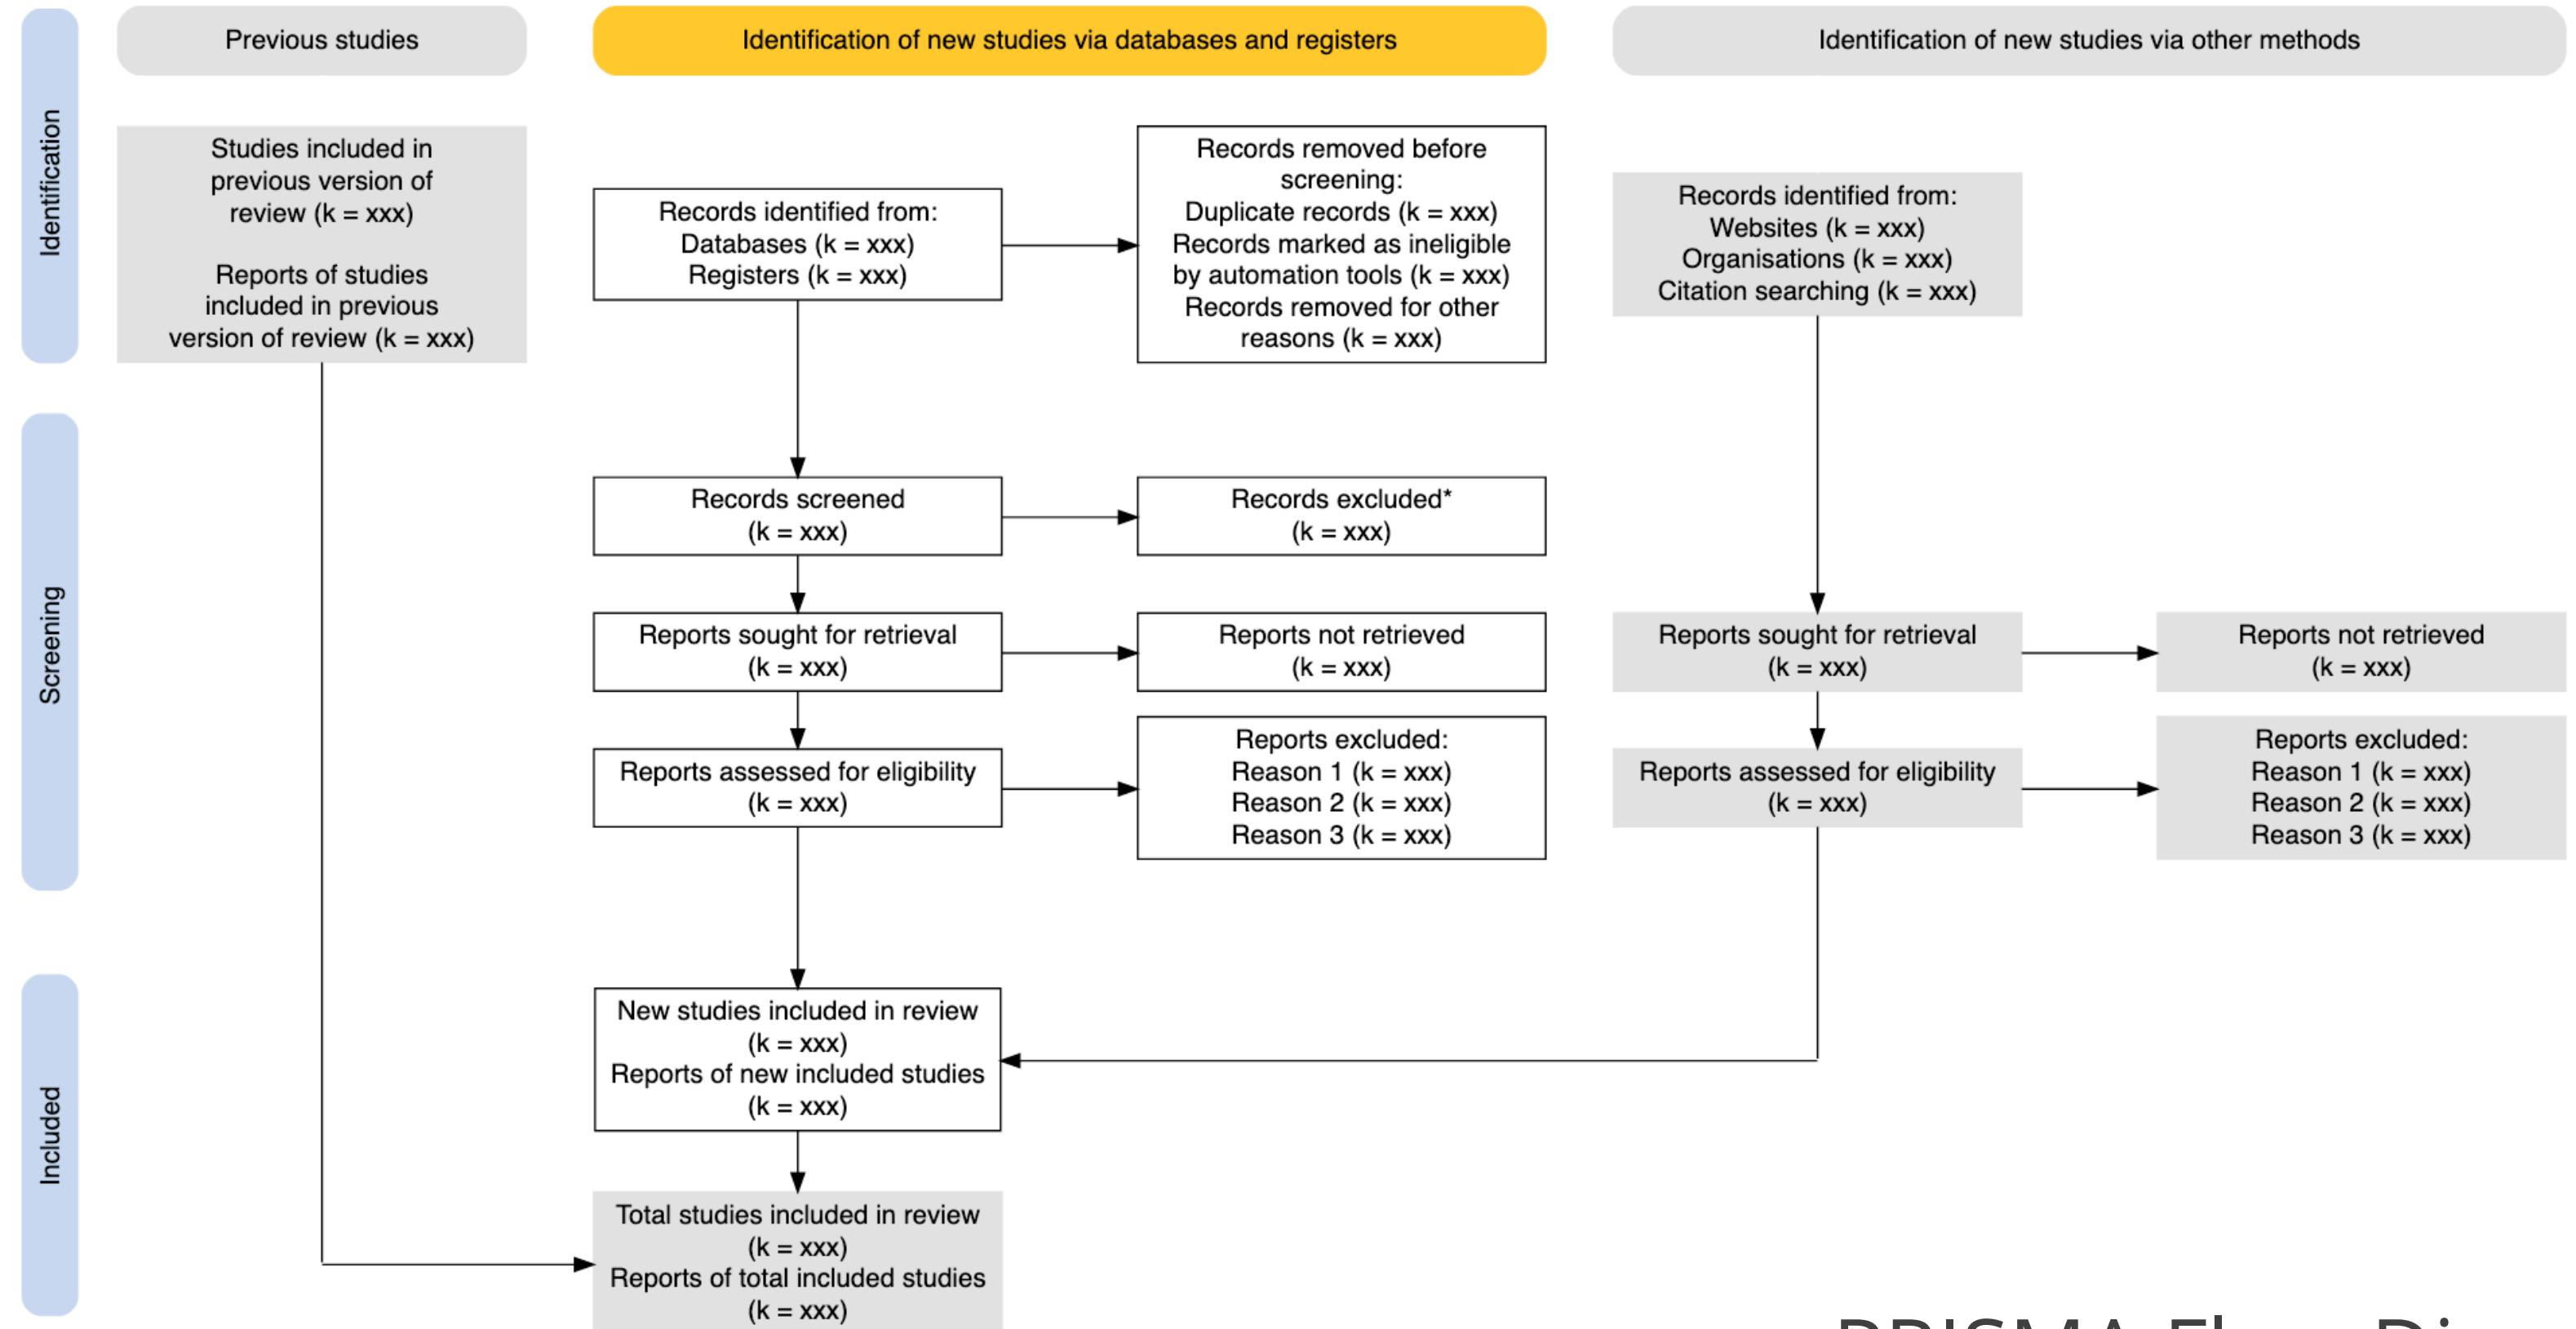

Before starting

- What is the research question?
- What is the aim: write a chapter for a dissertation/thesis, or an article?
- Which type of literature review will you conduct?
 - Search for, and read some literature reviews that uses the technique that you want to use.

Conducting a Systematic Review

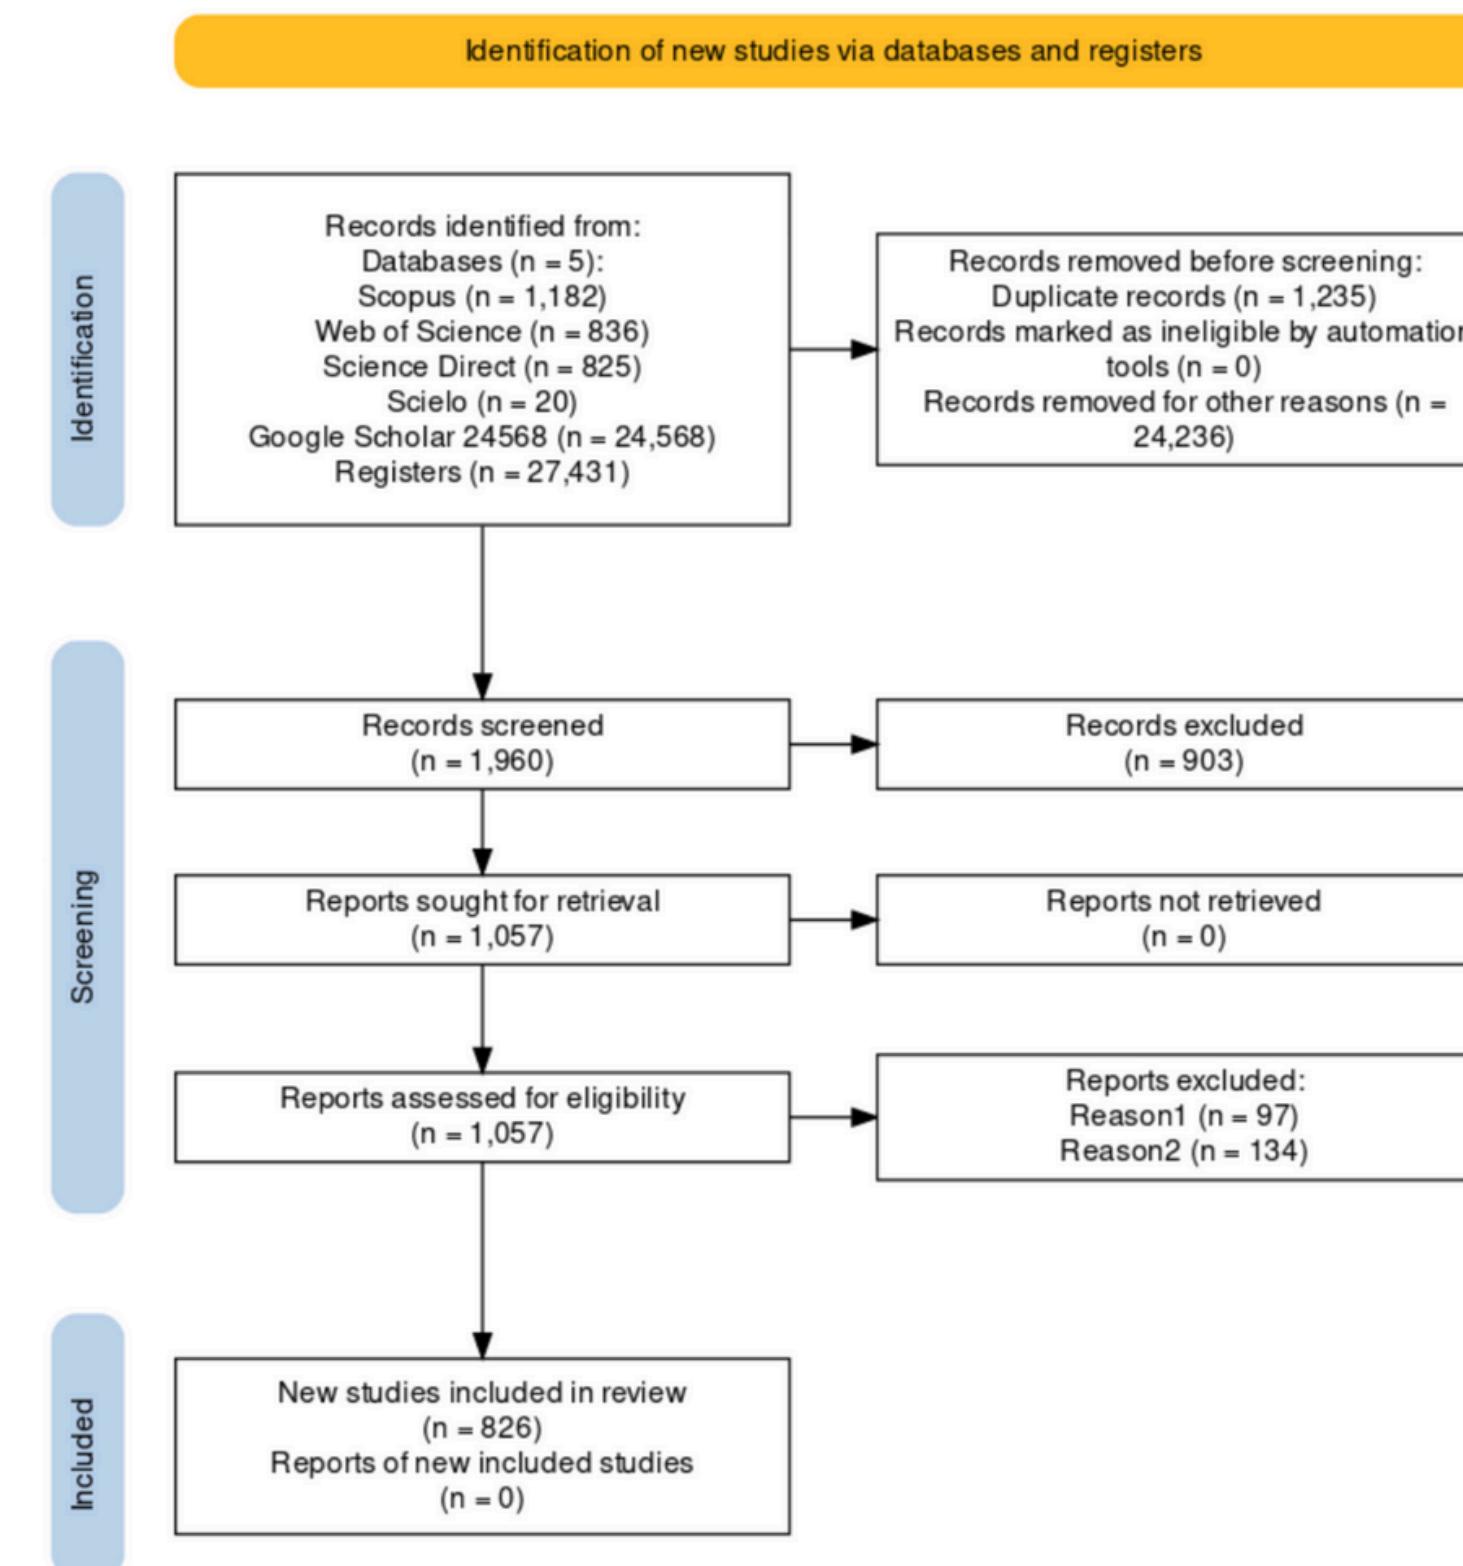

For Systematic Review

- Before starting, read about: Preferred Reporting Items for Systematic reviews and Meta-Analyses (**PRISMA**)
 - Main website
 - Checklist
 - Paper
 - Flow Diagram

PRISMA Flow Diagram

Example

Under review:

A Systematic Review of The Literature on Climate Justice: A Comparison Between The Global North and South
Marcos Tavares de Arruda Filho; Pedro Henrique Campello Torres; Pedro Roberto Jacobi

Under review:

A Systematic Review of The Literature on Climate Justice: A Comparison Between The Global North and South
Marcos Tavares de Arruda Filho; Pedro Henrique Campello Torres; Pedro Roberto Jacobi

Abstract: This study analyzes the characteristics of publications on climate justice on a global scale and between countries in the North and South, **using the guidelines of the PRISMA model.** **826 relevant papers were identified** in **five databases**, with 717 from the global North and 109 from the South. There is a concentration of work in the countries of the Global North. The social and economic disparities between countries in the North and South are reflected in the distribution of publications. The focus of climate justice research in the countries that make up the Global South is mainly on the socio-environmental context and the social vulnerability of the population; in this group, it is the first time that this theme has been expressed in the analysis.

Keywords: climate change, climate emergency, bibliometrics, database search, climate policy.

Suggestion: read the "Materials and Methods" section of this paper.

For Systematic Review

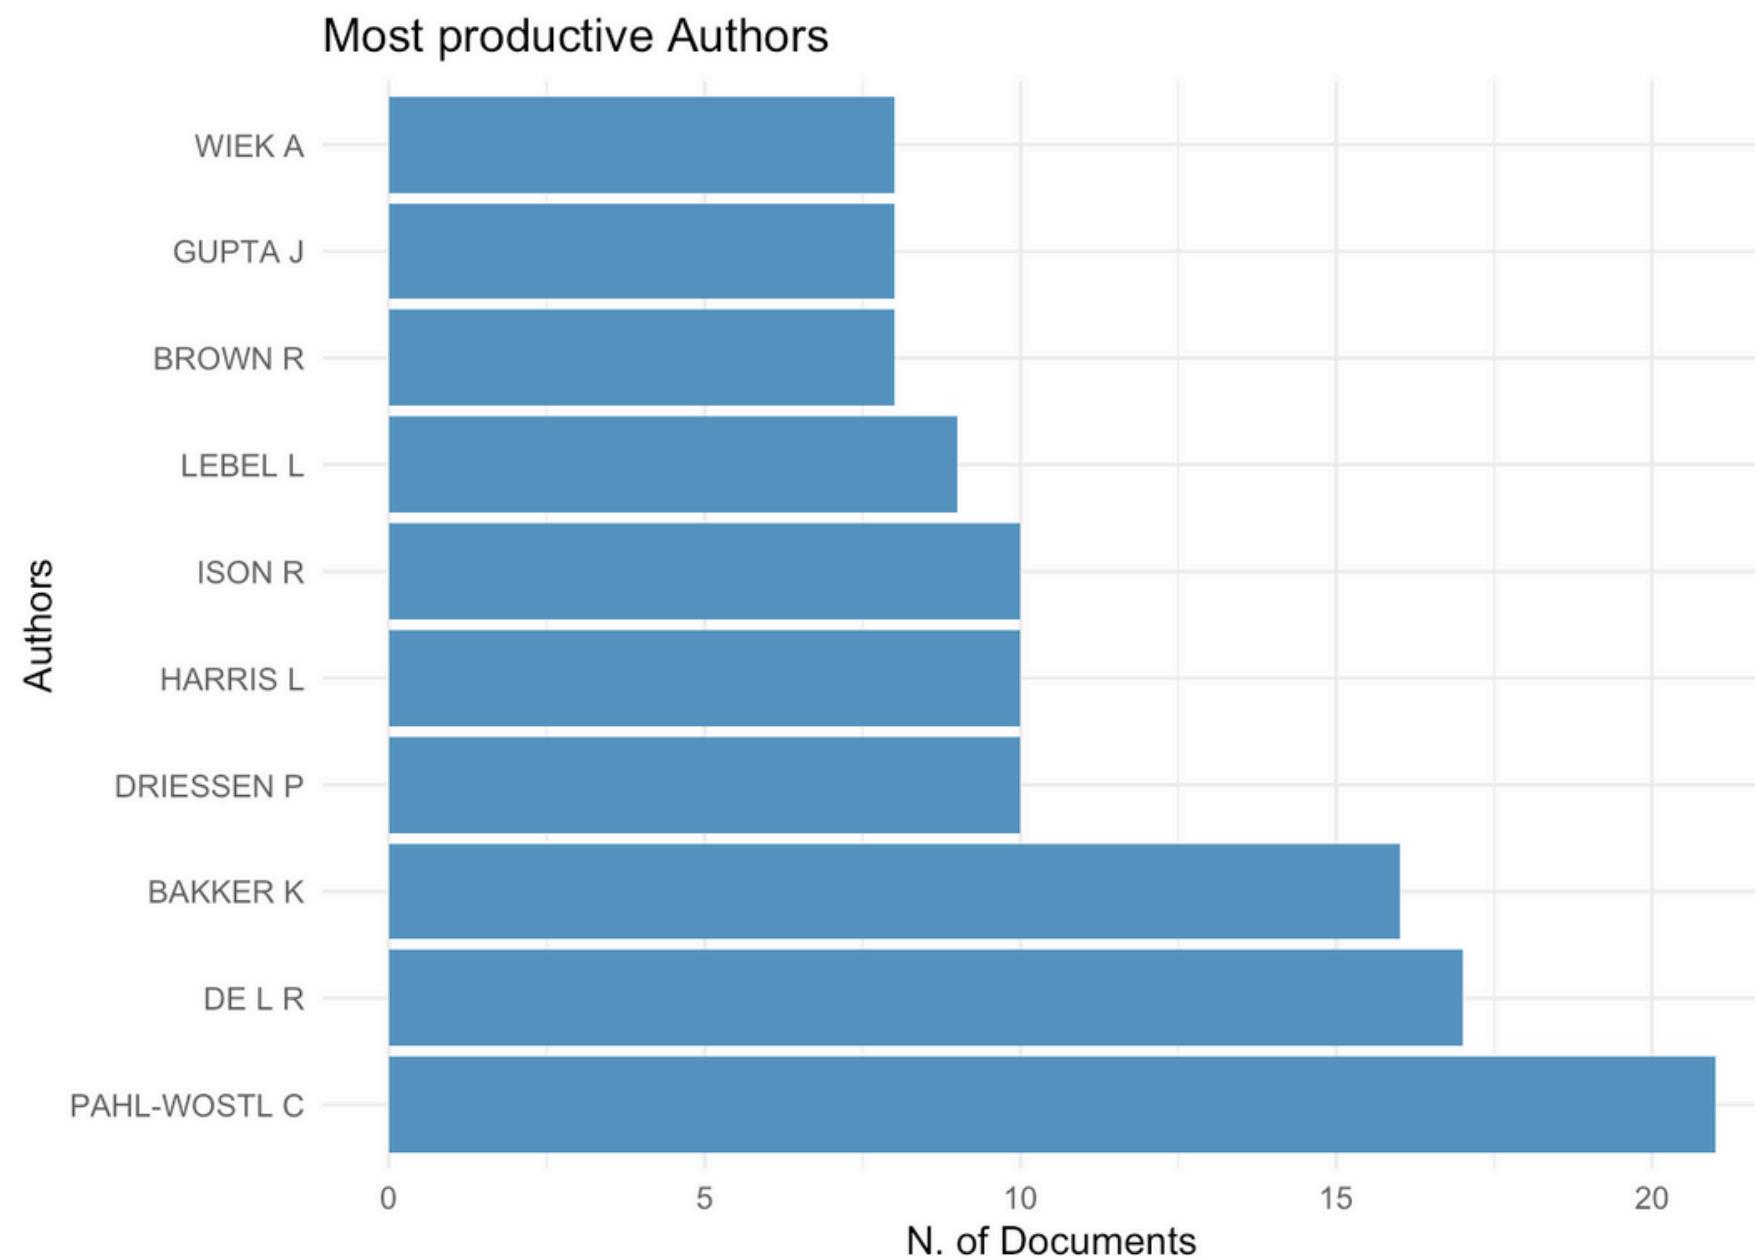

- Use the research notebook (mentioned before!).
- Save (and back-up) every file downloaded.
- Take notes about the downloaded files: when did you download each file? From which database?
- Don't edit the raw files. Create a new table to unite what is important.

Conducting a Bibliometric Review

Conducting a Bibliometric review

- Read about **PRISMA**! It can help you think about the steps.
- "How to conduct a bibliometric analysis: an overview and guidelines" (Donthu *et al.*, 2021)
